JADEWIN N10

CHAIN EXTENDER

CHEMICAL COMPONENT

COMPONENT Styrene-acrylonitrile-methacrylate is a three-element non-regulatory copolymer

SPECIFICATION AND PHYSICAL PROPERTIES

TEST	UNIT	SPECIFICATION
APPEARANCE		COLORLESS TRANSPARENT PARTICLES

FEATURE AND APPLICATION

- *JADEWIN N10 increases the viscosity of nylon, polyester, and polyurethane, reducing the melt flow rate (melt index).
- *JADEWIN N10 increases the strength and toughness of nylon, polyester and polyurethane.
- *JADEWIN N10 enhances the hydrolysis of nylon, polyester and polyurethane.
- *The addition of JADEWIN N10 to the material will allow the strength of the nylon or polyester materials to meet the new material.
- *JADEWIN N10 adds a little bit of the new material to inhibit decomposition.
- *JADEWIN N10 suggests that the addition of 0.5 to 1.0 percent, the exact amount of added quantity based on product performance, application conditions, and formulation.
- *The JADEWIN N10 can be used in PA6, PA66, PC, PET, PBT, polyurethane etc.

PACKING

25 kg Compound bag

STORAGE

Keep container tightly closed and dry and storage in cool place

CHEMICAL INVENTORIES

Australia - AICS
Canada - DSL

JADEWIN

EU - EINECS

China - IECSC

Japan - ENCS

New Zealand - NZIoC

Korea - ECL

USA - TSCA

Philippines - PICCS
